

Founding Lead

Can you build a startup whose users wear khaki?

As Founding Lead, you will build and run an AI enforcement startup inside Crashfree India. The product already works: it tells traffic police which vehicle to stop, and why, in seconds. It is live in three cities. Your job is to take it across India.

The funding, the tech and Cars24's backing are in place. The plan is yours to write.

What you will actually do:

- Walk into a police commissioner's office. Keep going back until it's a yes.
- Sign states, launch cities, and stay until officers use it every day.
- Live in the data: what's working, what's broken, where next.
- Lead a small team of one or two.
- Pick the next city. Then the one after that.

What you need to bring:

- Experience with government. You know how a file moves.
- Something you have built or run yourself. Failures count.
- A digitally native brain: dashboards, not registers.
- More interest in impact than in titles.
- Patience for slow systems, and the stubbornness to beat them.

What you will learn:

- That government can move fast when the right person is in the room.

Green light?

Write to me at gajendra@crashfreeindia.org with the subject *Founding Lead*. Send your CV and a 4-minute video on a problem India looks away from.
