AI Traffic Enforcement · Crashfree India

*Build this vertical like a founder.
We'll back you like one.*

You will build and run a vertical inside Crashfree India like your own company: our AI enforcement tech, built with Cars24 and run with traffic police. It tells officers which vehicle to stop, and why, in about ten seconds, and it is live in three cities. Your job is to take it to 100 districts across India.

There is no set playbook. You will build it.

What you will do:

- Set the expansion plan: which states and districts, in what order.
- Sign partnerships with police, transport departments and state governments.
- Run each launch with our tech team, and stay until officers use it every day.
- Track the data, fix what isn't working, and decide where to go next.

What you need to bring:

- Experience working with government: police, district or state administration.
- Something you have built or run yourself. Failures count.
- Comfort with data and technology.
- A track record of choosing impact over titles.
- Patience with slow processes, and the persistence to push them.

What you get:

- A small team, funding and Cars24's tech.
- A direct line to Cars24 and Crashfree India leadership.

How to apply:

Scan the QR code or use the link in the post. Share your CV and a short note on why you fit. A plus: a 4-minute video on a problem India looks away from.
